Comprehensive Echocardiographic and Cardiac Magnetic Resonance Evaluation Differentiates Among Heart Failure With Preserved Ejection Fraction Patients, Hypertensive Patients, and Healthy Control Subjects

J Am Coll Cardiol Img 2018;11:577-85

In Figure 3, the groupings for VE/VCO₂ slope were incorrect. The first group (with higher ECV and lower GLS) should be ≥34.06 and the second group should be <34.06. The text of the paper and the figure legend are both correct.

The correct figure is printed below.

The authors apologize for this error.

The current online version has been corrected.
